

# Repair of Moderate Penile Curvature

an outpatient procedure to straighten moderate curvature of the penile shaft that does not require a biological graft or [implant](#).

## About The Procedure

Many men suffer from penile curvature, a deformity that may be associated with erectile dysfunction or pain during sexual intercourse. This condition is known as Peyronie's Disease or *induratio penis plastica*. In many cases, the signs and symptoms can be managed conservatively. If this is insufficient, then the only solution may be surgical correction. When there are no complex non-curvature deformities and curvature is less than 60 degrees, the right technical choice may be a plication straightening procedure that does not require a biological graft or [penile implant](#).

When considering surgical penile straightening, it is important to know that the surgeon who will carry out your surgery has the experience and focus to deliver the quality you want. It is also important to know what you are paying for.

Allevion offers a comprehensive surgery package for correction of penile curvature that takes into account the experience and focus of the surgeon. Our surgeons are superbly trained. All specialize in correction of penile curvature and are absolutely committed to service.

## Every Package Includes:

Every surgery package includes:

- Your surgeon
- Surgeon assistant
- Anesthesiologist
- Operating room
- Ambulatory facility stay
