

Radical Prostatectomy

A minimally invasive surgery package for men with early stage prostate cancer

About The Procedure

Men with early stage prostate cancer can manage their disease with active surveillance, external radiation, seed radiation, or surgical removal of the prostate and surrounding tissue with a technique known as a radical prostatectomy. Surgical removal can be accomplished with open and with minimally invasive, laparoscopic surgery, which can be done with or without the use of a surgical robot, which is sometimes referred to as a robotic prostatectomy.

When considering prostate cancer surgery, it is important to have the right surgeon. Does your surgeon have a lot of experience? Does he focus on the surgical treatment of prostate cancer? Will he take the time to understand your situation and goals?

Our prostate cancer surgeons are absolutely focused on prostate cancer surgery. Each has years of experience, does his own pre-operative evaluations, carries out your surgery, and has an absolute commitment to service. Many have been involved in developing the techniques and technology that are today industry standard. If you are looking for quality, then our surgeons are your solution.

Every Package Includes:

Your minimally invasive radical prostatectomy surgery package includes:

- Your surgeon
- Surgeon assistant
- Anesthesiologist
- Operating room
- Technical staff
- Robot, if needed
